

Admin Analytics Dashboard

Objective

Build a responsive **SaaS admin dashboard**. This task heavily tests Grid/Flex combinations.

Colour Palette

Page Background	#F1F5F9
Sidebar	#0F172A
Sidebar Text	#CBD5E1
Active Menu	#4F46E5
Card	#FFFFFF
Heading	#0F172A
Body	#64748B
Border	#E2E8F0
Success	#16A34A
Danger	#DC2626
Warning	#D97706

Typography

Font: Inter

Dashboard title	24px / 700
KPI number	28px / 700
KPI label	14px / 500
Card heading	16px / 600
Table text	14px
Sidebar	14px / 500

Desktop Dimensions

Sidebar width:	240px
Header height:	64px
Main padding:	32px
Card padding:	20px
Grid gap:	24px
Border radius:	12px

KPI Section

Use:

```
grid-template-columns: repeat(4, 1fr);
```

Responsive:

Desktop → 4 columns
Tablet → 2 columns

Mobile → 1 column

Main Analytics Area

Desktop:

2fr 1fr

Example:

Revenue Chart	Recent Orders
66%	33%

Below:

Traffic	Top Products
50%	50%

Mobile Behaviour

At <768px:

- Sidebar becomes hidden
- Hamburger button appears
- Header becomes full width
- KPI cards → 1 column
- Charts → 1 column
- Tables should horizontally scroll rather than break the layout

Tailwind Skills Tested

Students must use:

- `grid-cols-4`
- `md:grid-cols-2`
- `lg:grid-cols-4`
- `grid-template-columns` via arbitrary values
- `flex`
- `flex-col`
- `justify-between`
- `items-center`
- responsive padding
- overflow handling
- sticky positioning
